The choice is clear

It's not only the chameleon
that has evolved to survive...

The choice is clear

Power supplies to drive the new era

OMRON power supplies have evolved to keep pace with changes at manufacturing sites.

To survive in the rapidly changing market, manufacturing sites must also continually change.

OMRON looks at these changes as a global manufacturer and seller of control devices,
and we use what we've learned from our own factory floor in our product development.

We continue to develop power supplies that meet the needs of the ever-changing manufacturing floor.

In order to maximize the added-value of equipment and control panels,
we have created these two evolved power supplies.

*Image: The chameleon has evolved over the years to be able to change its body color to protect it from enemies and to catch prey.
This is the veiled chameleon, which lives in the Republic of Yemen. It grows to around 40 cm to 60 cm in length.

For changes to the products manufactured

We make compact power supplies that save space to support our customers' increasingly sophisticated equipment.

Compact

Side-by-side mounting

Conforms to transformer standards

For changes to the places of manufacturing

These power supplies can be used in tough environments, from cold regions to the tropics, and even at high altitudes.

Altitudes up to 3,000 m

Wide ambient operating temperature range

Life expectancy: 10 years*1

CERTIFIED

For changes to the people who manufacture

Wiring can be easily done by workers of varying skill levels.

Industry's smallest class*2
General-purpose Power Supply S8FS-G 300 W

World's smallest*2
DIN rail-mounting Power Supply S8VK-S 240 W

Power supplies this small, only from OMRON

*1. Life expectancy depends on certain conditions. Refer to the datasheet of each product for details.
*2. According to OMRON investigation in November 2016.

Selection is Easy.

For DIN rail-mounting

DIN rail-mounting Power Supply **S8VK-S**

Saves Space, Allowing Control Panel Downsizing

World's smallest*¹

The space required for the power supply is reduced, allowing the control panel to be downsized and components to be added inside the control panel.

Side-by-side mounting*³

Cooling space between power supplies is not necessary, reducing the installation area. This enables greater flexibility in control panel design.

Reduced Wiring Work

Push-In Plus Terminal Block

It's as easy as inserting an earphone jack. Tools are not required for wiring, reducing the time and work.

Note: Information for Push-In Plus and screw terminal blocks is based on OMRON's actual measurement value data.

*1. According to OMRON investigation in November 2016.
 *2. Comparison to previous OMRON Power Supply.
 *3. Conditions apply to models and derating for side-by-side mounting.
 *4. Comparing mounting of three OMRON S8VK-G (60 W) units to side-by-side mounting of three S8VK-S (60 W) units.

Prevents Trouble during Installation and Maintenance

Cover to prevent screw dropout

The terminal block cover features a screw dropout prevention mechanism. Screws will not drop when connecting terminals, making work easier.

Cover to prevent foreign matter ingress

The front cover guards against ingress of foreign matter. This prevents accidental insertion of tools and protects against electric shocks.

Enables Stable Operation of Devices and Equipment over Long Periods of Time

Features a 10-year life expectancy, including for the fan

These units have a 10-year life expectancy, including for the cooling fan, which in the past required maintenance and replacement.

			48 V	13 A	S8FS-G60048CD		

*1. The output power is 40 W. *2. The output power is 80 W. *3. The output power is 105 W. *4. Applicable to products produced from May 2018.

*5. Production started in July 2022. *6. Production started in August 2022.

Note 1. Refer to the datasheet of each product for details.

*The range for compliance with EU Directives and safety standards (UL, EN, etc.) is 100 to 240 VAC (85 to 264 VAC).

About dimensions shown

In the case of standard mounting, the width (W) and height (H) are given with the distance from the DIN rail serving as the depth (D).
