OMRON

Improved energy and material efficiency for control panels

Innovation for saving energy and resources in control panels

Global warming and climate change are global social issues that drive over 150 countries and regions worldwide to take action toward decarbonization. Our goal is to help manufacturers by improving energy and material efficiency in control panels by 50%, compared to our previous devices. We innovate new ways of building control panels, that are at the heart of manufacturing sites.

Process

Significantly reduce design and manufacturing effort

Innovation in the design and building process

Further Evolution for Panels

Contributing to building more sustainable control panels

Panel

Realize compact & highly reliable control panels

Energy and material efficiency

Simple & Easy People

Environmental impact

Improve energy and material efficiency of control panels, contributing to reaching sustainability goals

People

Offer reliable and user-friendly manufacturing for everyone working with control panels

Integrating green perspectives into Value Design

Value Design for Panel (Value Design) is the common concept shared across OMRON's in-panel product specifications to deliver new value to your control panels.
This Value Design also integrate environment consideration concept that enable earth and user-friendly control panel building.

Value Design for Panel

1 ..... Unified height & slim size*1

2 ..... Side-by-side mounting at (55°C) ambient temperature*2

3 ..... Unique Push-In Plus technology*1

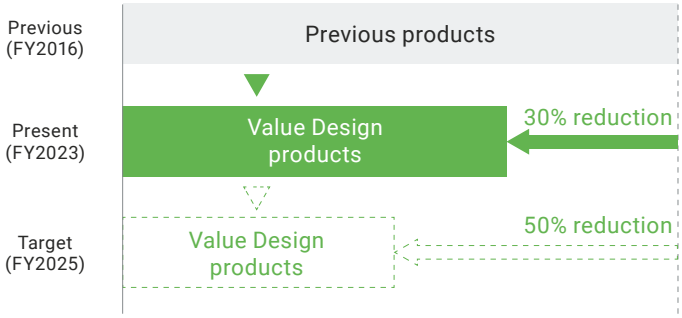
4 ..... Front-in and front-release wiring

5 ..... eCAD library

6 ..... Certification for CE, UL, and CSA

7 ..... Features that save energy and resources*3

Power consumption and size of devices



*1. Except for some products
*2. Side-by-side mounting is possible in the same series
*3. Lower power consumption and smaller size of devices compared to previous (2016) products

Save energy

Monitor the power consumption of control panels

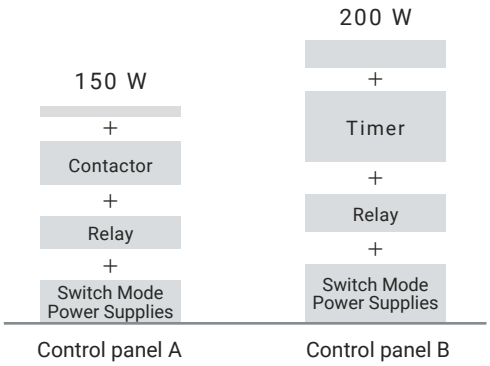
OMRON helps you measure how effectively Value Design products actually reduce control panel power consumption.

Power monitoring enables easy assessment of the power saving effect

Power monitors provide visualization of the power consumption reduction effects for each control panel

BEFORE Assessment of power consumption reduction effect requires massive effort because each control panel has different device configuration and therefore has to be measured separately

Measurements taken per model and then totaled



Value Design for Panel Power monitor constantly visualizes power consumption, with no need for separate measurements

Continuous measurement at once without individual measurement

Control panel A Control panel B

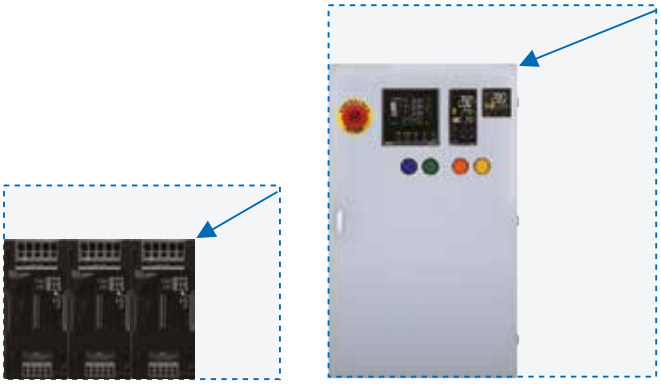
Power Monitors (KM-N2-FLK)

Further Evolution for Panels

Space-Efficient and Advanced Control Panels

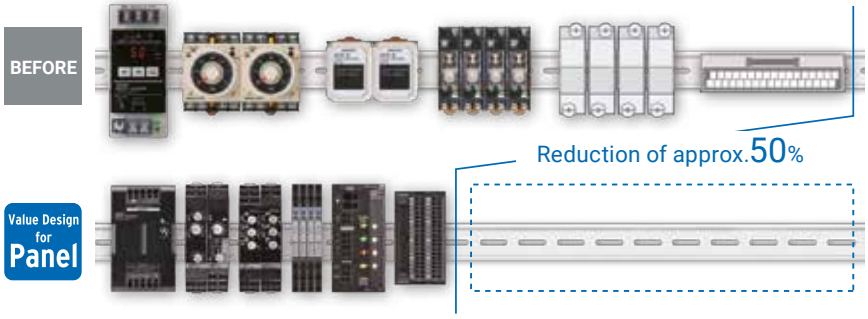
Unified size and side-by-side mounting help delivering more compact control panels with additional functionality.

Small slim size and clos mounting solves the space problem of the control panel



Slim, side-by-side mounting technology saves space and enables the creation of advanced control panels

You can add a new function, at the re-engineering stage for improving product quality and securing safety of the production line.

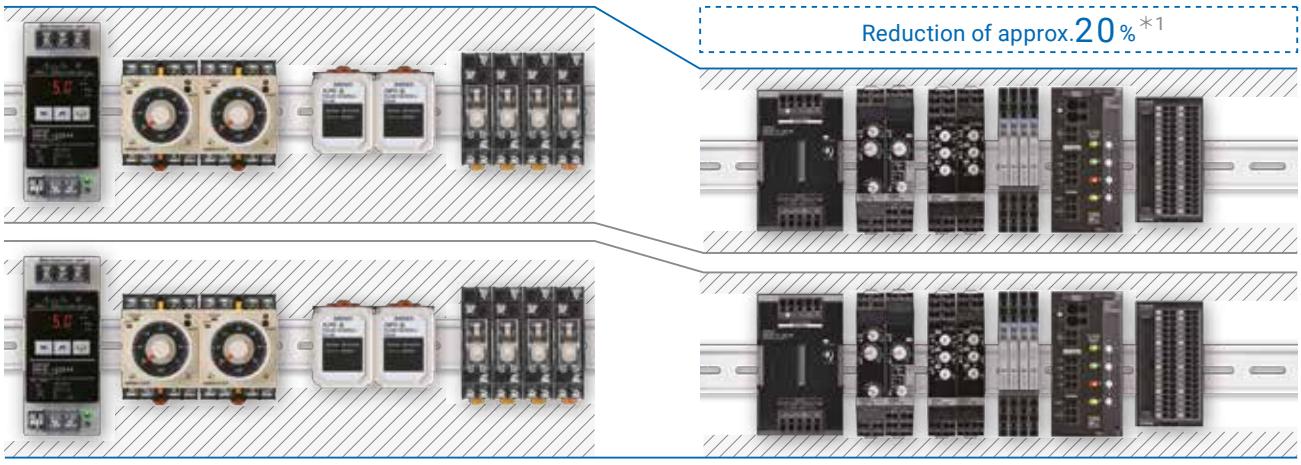


The saved space can be used for implementing additional functions such as safety or IoT.

Safety Controllers | Condition Monitoring Devices | Networks

Uniform height minimizes unused space and reduces the overall size of control panels

When designing new control panels, reducing their height provides a clear view of the entire production line, enhancing safety



BEFORE The different heights create a lot of unused space

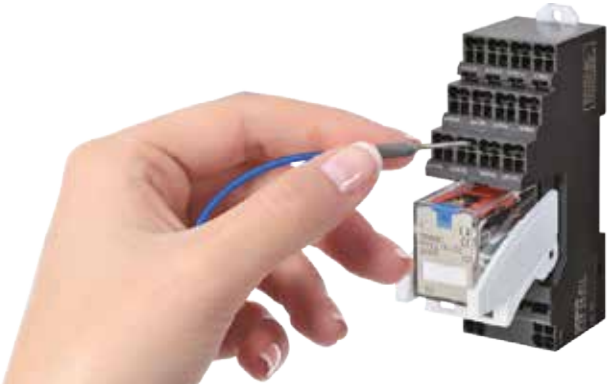
Value Design for Panel Unused space is minimized, and the spacing between wiring ducts is optimized

Simple and easy to use

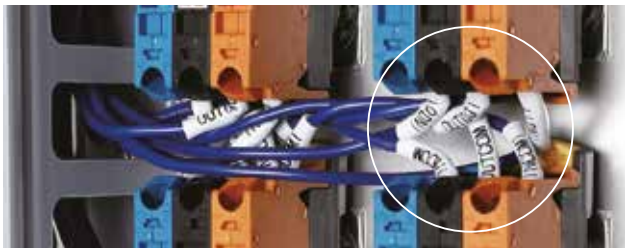
Reducing Wiring Work

Push-In Plus technology and Front-in / Front-release Wiring make wiring work simpler and faster.

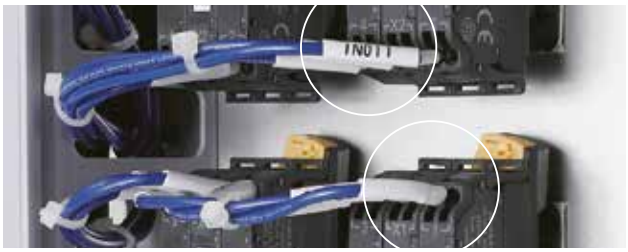
Push-in Plus technology solves control panel wiring issues



Front-in Wiring improves workability and safety without interference of wires even in the narrow space among devices

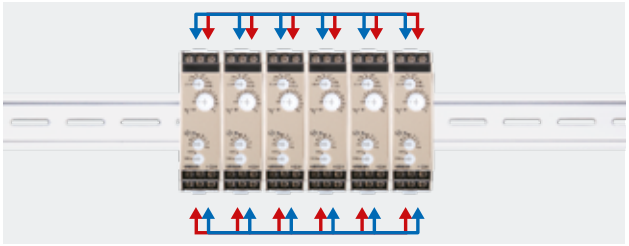


BEFORE Wiring in confined spaces is challenging due to wire interference caused by screw terminals that require vertical wiring

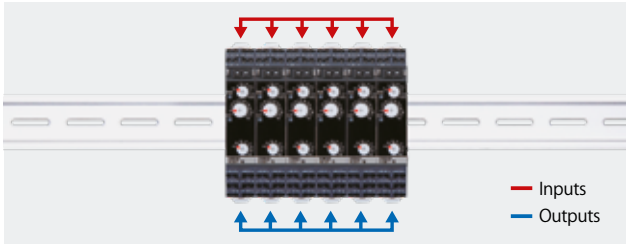


Value Design for Panel No interference of wiring helps improve workability and safety

Improved wiring workability by unified I/O terminal positions on the top and bottom



BEFORE Difficult wiring due to mixed I/O terminals located on both the top and bottom



Value Design for Panel A unified method with inputs at the top and outputs at the bottom

Easy wiring with both hands for stranded wires with holding screwdriver

BEFORE One hand wiring with the other hand holding the screwdriver

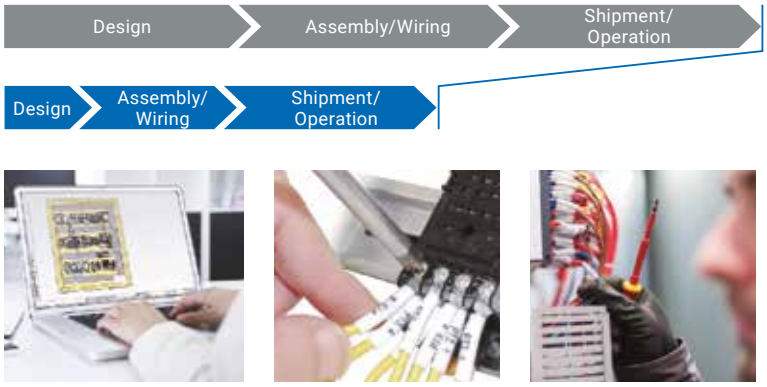
Value Design for Panel Wiring with both hands, because the screwdriver is held in the release hole

Design and building process

Shortening Lead Time for Control Panel Building

Compatible with eCAD and worldwide safety standards, accelerating the entire process of control panel manufacturing.

Solving process issues in control panel building



Design

eCAD library provided for all models greatly reduces design work

Up to 50%*1

OMRON provides the libraries for over 48,000 models*2, highest in the industry, to achieve the great reduction of works for electrical design drawing and data creation.

eCAD Partners

By cooperating with various partners, we offer you more choices for your eCAD solutions.

Assembly/ Wiring

Push-In Plus technology requires only a single step, greatly reducing wiring work

Reduction of approx. 60%*3

1. Remove the screw
2. Connect with the terminal
3. Tighten the screw
4. Put a check mark
5. Retighten the screw

BEFORE A lot of steps are required to complete wiring for the screw terminal...

1. Insert the terminal

Value Design for Panel Push-In Plus technology completes in a single step

*3. Information for Push-In Plus and Screw Terminal Blocks is based on OMRON's actual measurement data

Shipment/ Operation

No need for retightening, even when vibration is applied on terminals

The pressure of the clamp spring holds the ferrule or wire securely with Push-In Plus technology, eliminating worries about screws loosening or disconnection due to vibration.

BEFORE The screw is loosened and dropped by vibration

Retightening is needed before export and shipment

Value Design for Panel No drop-off or retightening of screws

Slim I/O Relays
G2RV-ST

Cat. No. J267

- Slim I/O relay with width 6.2 mm
- The test button function and mounted relay use plug-in terminals that are difficult to bend when exchanging.
- Since G2RV is a transparent case, confirming the state of the contact with the naked eye is possible, and easy to confirm abnormality on-site (installed location).

Terminal Relays
G6D-F4PU/G3DZ-F4PU

Cat. No. J228

・Model with Push-In Plus technology Added to Terminal Relays with Four-point Output Lineup.
・Rated 5A is achieved with optimum designs than conventional screw-type G6D-F4B (rated 3A).

Wide Variety of Application

• Realized a slim shape with a switching capacity up to 3 A (DC), and 2 A (AC)

Solid-state Timers
H3DT

Cat. No. M090

• Slim Timers (17.5-mm width) with two sets of contacts: One of the slimmest Timers worldwide. *1
• Reduces power consumption (active power) by up to 60% to help reduce heat generation in control panels.*2

*1.According to OMRON investigation in Feburary 2020.
*2.Based on OMRON comparison (excluding the H3DT-H).

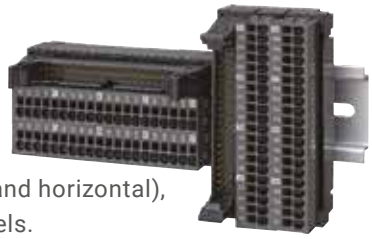
Ultra-Compact Interface Wiring System
XW2K

Cat. No.G152



- This product is the industry's smallest*1 and is mountable in two ways (vertical and horizontal), so you can use space efficiently to downsize and save space on your control panels.
- Wiring patterns specifically designed for connections with the PLCs of each company reduce the work required for signal layout checking.
