CS1W-EIP21*1/EIP21S

CSM_CS1W-EIP21_EIP21S_DS_E_7_10

EtherNet/IP unit with tag data link capacity of 180,000 words or more

- EtherNet/IP is an industrial multivendor network that uses Ethernet. Managed by the ODVA (Open DeviceNet Vendors Association), it has open standards and is used with a wide range of industrial devices.
- The EtherNet/IP Unit supports tag data links to enable sharing data between devices at Ethernet nodes and a message service for sending and receiving data when required.
- The EtherNet/IP Unit supports the same FINS/UDP, FINS/TCP and Socket service functionality as Ethernet Units.
- Various security functions enable secure network connections. (CS1W-EIP21S)

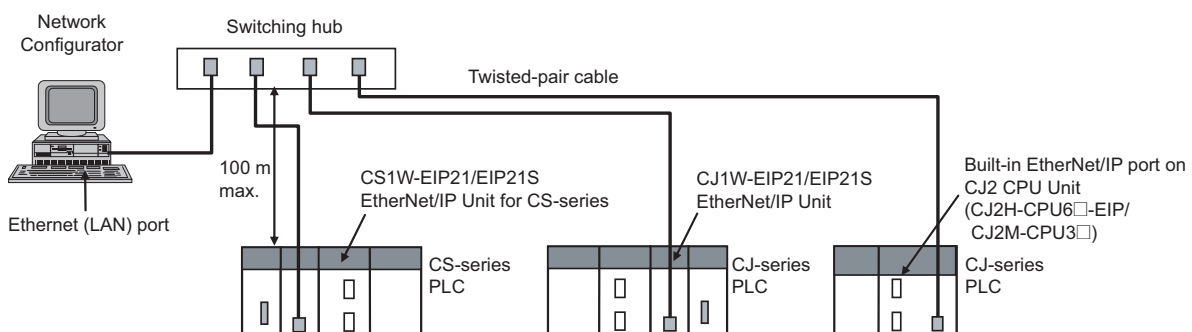

EtherNet/IP™

Features

- Large-capacity tag data links are easily enabled by simply setting connections, with no programming required.
- Tag data links can be used to exchange data with up to 256 nodes over up to 256 connections.
- Up to 256 connections can be set per Unit with up to 722 words of data per connection, for a total of up to 184,832 words of link data. (There is no limit to the data link capacity for the overall network.)
- Data concurrency is maintained within each connection (for up to 722 words).
- Tag data link settings can be changed for individual Units even while tag data links are being used on a network.

*1. In this case, pps means "packets per second" and indicates the number of packets that can be processed in one second.

*2. When using CS1W-EIP21S or CS1W-EIP21 with version 3.0 or later.

When using CS1W-EIP21 with version 2.1 or earlier, the allowed communications bandwidth per Unit is 6,000 pps.

*3. To use 505 to 1,444 bytes as the data size, the system must support the Large Forward Open standard (an optional CIP specification). The CS/CJ-series Units support this standard, but before connecting to nodes of other companies, confirm that those devices also support it.

*4. If the maximum data size is exceeded, the data refreshing with the CPU Unit will extend over two or more cycles.

*5. If status layout is set to user settings, the maximum number of tags is as follows.

Condition	Output/Transmission	Input/Reception
CS1W-EIP21S	18	18
CS1W-EIP21	19	19

*6. The table below shows value when the layout type is User defined.

Data (words) that can be refreshed per CPU Unit cycle	EIP21		EIP21S
	Output/Transmission	Input/Reception	
	7405	7405	7321
			7385

*7. If parameters are changed in the EtherNet/IP Unit, however, the EtherNet/IP Unit will be restarted. When other nodes are communicating with the affected node, the communications will temporarily time out and automatically recover later.

*8. Because the EtherNet/IP Unit is equipped with an IGMP client, unnecessary multicast packets can be filtered by using a switching hub that supports IGMP snooping.

*9. The EtherNet/IP Unit uses the TCP/UDP port numbers shown in the following table.

Service	Protocol	Port number	Remarks
Tag data links	UDP	2222	The port number is fixed.
Class 3, UCMM	TCP/UDP	44818	
DNS	UDP	53	
Secure Comm	TCP	443	The port number is fixed. It is supported by the CS1W-EIP21S only.
FINS/UDP service	UDP	9600	Port numbers in the Unit Setup can be changed with the CX-Programmer.
FINS/TCP service	TCP	9600	
FTP	TCP	20, 21	
SNTP	UDP	123	
SNMP	UDP	161	
SNMP trap	UDP	162
