

**Product Discontinuation Notices**

Issue Date  
\*\*\* \*\*, 2024

**Product Discontinuation**

Temperature Controllers

**E5AN-HT series**  
**E5EN-HT series**  
**E5CN-HT series**

**Recommended Replacement**

Temperature Controllers

**E5AC-T series**  
**E5EC-T series**  
**E5CC-T series**

**[ Final order entry date ]**

The end of March, 2025

**[ Date of The Last Shipping ]**

The end of June, 2025

**[ Caution on recommended replacement ]**

- The rated current of the auxiliary output relay will be changed from the discontinued product: 3A to the recommended replacement product: 2A.
- Regarding control output, discontinued products required customers to purchase optional output units separately and combine them to achieve the output specifications, but recommended replacement products are sold with the necessary control output installed at the time of purchase. It becomes. For this reason, please select the model that corresponds to the control output you are currently using from the recommended alternative models. Please note that if you are using some output units, there are no recommended replacements. Please see the list of recommended replacement products for details.
- Analog input scaling will be changed from discontinued product: -19999 to 30000 to recommended replacement product: -1999 to 9999.
- The PID setting range differs between discontinued products and recommended replacement products. For details, please see the "Performance" section of the main text.
- The alarm setting range will be changed from -19999 to 32400 for discontinued products to -1999 to 9999 for recommended replacement products.

**[ Difference from discontinued product ]**

[ Program Control ]

Item		Product discontinuation E5[]N-HT series	Recommendable replacement E5[]C-T series
Number of programs (patterns)		8	←
Number of segments (steps)		32	←
Segment setting method		Time setting (Segment set with set point and time.) Gradient setting (Segment type with set point, gradient, and time.)	←
Segment times		0 h 0 min to 99 h 59 min 0 min 0 s to 99 min 59 s	←
Alarm setting		Set separately for each program.	←
Reset operation		Select either stopping control or fixed SP operation.	←
Startup operation		Select continuing, resetting, manual operation, or run mode.	←
PID sets	Number of sets	8	←
	Setting method	Set separately for each program (automatic PID group selection also supported.)	←
Alarm SP function		Select from ramp SP and target SP.	←
Program status control	Segment operation	Advance, hold	Advance, segment jump, hold, and wait
	Program operation	Program repetitions and program links	←
Wait operation	Wait method	Waiting at segment ends	←
	Wait width setting	Same wait width setting for all programs	←
Time signals	Number of outputs	2	←
	Number of ON/OFF Operations	1 each per output	←
	Setting method	Set separately for each program.	←
Program status output		Program end output (pulse width can be set), run output, stage output	←
Program startup operation	PV start	Select from segment 1 set point, slope-priority PV start	←
	Standby	0 h 0 min to 99 h 59 min 0 day 0 h to 99 day 23h	←
Operation end operation		Select from resetting, continuing control at final set point, and fixed SP control.	←
Program SP shift		Same program SP shift for all programs	←

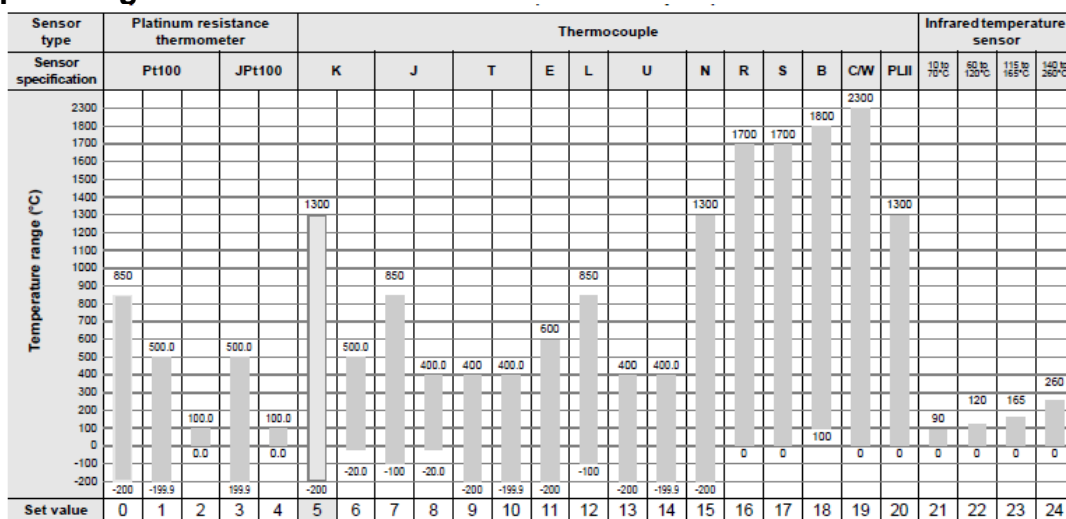

Recommendable replacement  
E5[C-T series

Input Ranges

Input type	Current	Voltage
Input specification	4 to 20 mA, 0 to 20 mA	1 to 5 V, 0 to 5 V, 0 to 10 V
Setting range	Usable in the following ranges by scaling: -1999 to 9999, -199.9 to 999.9, -19.99 to 99.99 or -1.999 to 9.999	
Set value	25	26, 27, 28, 29

Alarm Outputs

Set value	Alarm type	Alarm output operation		Description of function
		When alarm value X is positive	When alarm value X is negative	
0	Alarm function OFF	Output OFF		No alarm
1	Upper- and lower-limit #1		#2	Set the upward deviation in the set point for the alarm upper limit (H) and the lower deviation in the set point for the alarm lower limit (L). The alarm is ON when the PV is outside this deviation range.
2 (default)	Upper-limit			Set the upward deviation in the set point by setting the alarm value (X). The alarm is ON when the PV is higher than the SP by the deviation or more.
3	Lower-limit			Set the downward deviation in the set point by setting the alarm value (X). The alarm is ON when the PV is lower than the SP by the deviation or more.
4	Upper- and lower-limit range #1		#3	Set the upward deviation in the set point for the alarm upper limit (H) and the lower deviation in the set point for the alarm lower limit (L). The alarm is ON when the PV is inside this deviation range.
5	Upper- and lower-limit with standby sequence #1		#4	A standby sequence is added to the upper- and lower-limit alarm (1). #6
6	Upper-limit with standby sequence			A standby sequence is added to the upper-limit alarm (2). #6
7	Lower-limit with standby sequence			A standby sequence is added to the lower-limit alarm (3). #6
8	Absolute-value upper-limit			The alarm will turn ON if the process value is larger than the alarm value (X) regardless of the set point.
9	Absolute-value lower-limit			The alarm will turn ON if the process value is smaller than the alarm value (X) regardless of the set point.
10	Absolute-value upper-limit with standby sequence			A standby sequence is added to the absolute-value upper-limit alarm (8). #6
11	Absolute-value lower-limit with standby sequence			A standby sequence is added to the absolute-value lower-limit alarm (9). #6
12	LBA (alarm 1 type only)		#7	
13	PV change rate alarm		#8	
14	SP absolute-value upper-limit alarm			This alarm type turns ON the alarm when the set point (SP) is higher than the alarm value (X).
15	SP absolute-value lower-limit alarm			This alarm type turns ON the alarm when the set point (SP) is lower than the alarm value (X).
16	MV absolute-value upper-limit alarm #9	Standard Control 	Standard Control 	This alarm type turns ON the alarm when the manipulated variable (MV) is higher than the alarm value (X).
		Heating/Cooling Control (Heating MV) 	Heating/Cooling Control (Heating MV) 	
17	MV absolute-value lower-limit alarm #9	Standard Control 	Standard Control 	This alarm type turns ON the alarm when the manipulated variable (MV) is lower than the alarm value (X).
		Heating/Cooling Control (Cooling MV) 	Heating/Cooling Control (Cooling MV) 	

#1. With set values 1, 4 and 5, the upper and lower limit values can be set independently for each alarm type, and are expressed as H and L.

#2. Set value: 1. Upper- and lower-limit alarm

#3. Set value: 4. Upper- and lower-limit range

#4. Set value: 5. Upper- and lower-limit with standby sequence

For Upper- and Lower-Limit Alarm Described Above: 2

Case 1: #2

Always OFF when the upper-limit and lower-limit hysteresis operates.

Case 2: Always OFF

#5. Set value: 6. Upper- and lower-limit with standby sequence

Always OFF when the upper-limit and lower-limit hysteresis operates.

#6. Refer to the E5[C-T] Digital Temperature Controller's Programmable Type User's Manual (Cat. No. H195) for information on the operation of the standby sequence.

#7. Refer to the E5[C-T] Digital Temperature Controller's Programmable Type User's Manual (Cat. No. H195) for information on the LBA function (LBA).

#8. Refer to the E5[C-T] Digital Temperature Controller's Programmable Type User's Manual (Cat. No. H195) for information on the PV change rate alarm.

#9. When heating/cooling control is performed, the MV absolute upper limit alarm functions only for the heating operation and the MV absolute lower limit alarm functions only for the cooling operation.
