

Ref: Notice on EU Ecodesign Directive – Variable Speed Drives

Date: June 17, 2022

Dear customer,

Responding to your inquiry, please find below an overview on our policy and actions in relations to the Commission Regulation (EU) 2019/1781, laying down Ecodesign requirements for electric motors and variable speed drives pursuant to Directive 2009/125/EC of the European Parliament and of the Council, as amended by Commission Regulation (EU) 2021/341.

Target product categories from Article 2 and applicable deadlines of "(EU) 2019/1781":

Product categories	Deadline
Variable speed drives with 3 phases input.	01/07/2021

To ensure timely compliance to the Commission Regulation (EU) 2019/1781 for our Variable Speed Drives, we're in constant touch with our Business Unit and Partners.

We confirm that all the products already comply with the requirement of being classified according to the Energy Efficiency class IE2, although, especially at the beginning, the supply chain and the stock might be mixed, with information on the product not always up to date.

Therefore, please always refer to our dedicated Ecodesign web-page for the latest information; we constantly refresh it as soon as new data becomes available to us:
